Product Manager

Product Manager with 5+ years of experience driving business transformation, process re-engineering, and operating model modernization across BFSI and enterprise SaaS platforms. Proven expertise in analyzing as-is processes, conducting deep process mapping, and leading end-to-end process redesign initiatives to deliver scalable, user-centric product solutions. Strong track record of leading cross-functional teams to transform manual, fragmented workflows into automated, standardized platforms, enabling measurable improvements in efficiency, risk governance, and business outcomes. Skilled in translating complex business, credit risk, and operational requirements into re-engineered processes and technology-driven solutions, from MVP conceptualization to enterprise-scale rollout.

EXPERIENCE

JPMorgan Chase & Co | 3+ years (*Nov 2022 - Present*) | Bengaluru, India

Role: Associate Product Owner/Manager

Product: Strategic Multi Asset Review Tool (SMART) *June 2025 – Present*

SMART is an internal, web-based enterprise credit risk and portfolio grading application used across Commercial Term Lending (CTL), Real Estate Banking (REB), and Community Development Banking (CDB). It enables continuous monitoring and grading of CRE loan portfolios through standardized workflows, automated risk calculations, and integrated approval processes. SMART consolidates origination, spreading, and servicing application data to support timely, consistent credit decision-making.

Role & Key Contributions:

Led end-to-end business transformation and process re-engineering of credit risk assessment workflows by analyzing the as-is asset-level review process, identifying inefficiencies, and designing a future-state relationship-based risk assessment model, Conducted detailed process mapping (as-is vs to-be) and redesigned workflows to shift from fragmented, manual reviews to a standardized, workflow-driven process.

Played a pivotal leadership role in defining and delivering the KRG capability, translating business requirements into scalable product modules (Relationship, Analysis, Client Review) & drove process design and operating model transformation, enabling consistent calculation of LTV, DSCR, leverage, and exposure across multi-asset portfolios.

Partnered with Risk, Credit Officers, and Engineering teams to re-engineer decision-making workflows, improving governance, auditability, and scalability.

Impact & Results

- Improved turnaround time by ~40–50% and shifted Credit Officers' focus from asset-level reviews to high-value, relationship-level risk assessment (reviews reduced from multi-days or week-long review cycles to 3-4 days completion for most cases).
- Increased risk precision and data quality by standardizing relationship, loan, and property structures within SMART, enabling consistent calculation of LTV, DSCR, leverage, and exposure metrics across 100% of in-scope CRE portfolios.
- Reduced manual reconciliation and rework by ~30–40% through deep integration with origination (CREOS), spreading (CREAM), and servicing (STRATEGY) systems, ensuring accurate, pre-populated data and improving compliance, auditability, and scalability of credit review processes.

Product: Covenant Monitoring Automation (AI-Enabled Workflow Application) *Nov 2024 – May 2025.*

AI-driven workflow solution built on Aurora (in-house BPMN platform) to automate end-to-end covenant monitoring in Wholesale Lending. The platform unified document intake, credit monitoring, and financial statement spreading by combining intelligent document classification, AI-based data extraction, and straight-through processing with downstream credit systems.

Role & Key Contributions:

Owned end-to-end process transformation and workflow re-engineering of covenant monitoring by analyzing the as-is email-driven and manual processes and redesigning them into AI-enabled, automated workflows & Conducted process mapping across document intake, financial spreading, credit monitoring, and exception handling, identifying bottlenecks and inefficiencies.

Led process redesign and orchestration using BPMN workflows, integrating AI/ML-based document classification and data extraction to enable straight-through processing. Played a key leadership role in transforming fragmented operations into a standardized, rule-based operating model, improving scalability and control.

Defined future-state process architecture, KPIs, and workflow telemetry to measure throughput, accuracy, and operational performance.

Impact & Results

- Reduced document processing time from ~45 minutes to under 10 minutes using AI/ML-based data extraction.
- Automated classification of various document types, improving process accuracy and speed.
- Achieved $6–8M in annual savings, equivalent to 130–150 FTEs, through operational efficiency.
- Significant accuracy and risk improvement through standardized data extraction and single-source publishing into credit systems (iSpresso, CAMP), reducing manual errors and rework across covenant reviews.

Product: Loan Servicing Transformation Workflow Application: Aurora Studio & WaaS *Nov 2023 – Oct 2024*

Aurora is an enterprise Workflow-as-a-Service (WaaS) SaaS platform/application built to modernize Wholesale Lending Services (WLS) operations by replacing Outlook-based loan servicing workflows. The platform integrates 400+ shared mailboxes processing 4M+ annual loan servicing requests, enabling standardized, traceable, and configurable workflows across commercial banking verticals.

Role & Key Contributions:

Owned product delivery for Aurora Studio & WaaS, enabling workflow design and configuration via low-code capabilities. Led as-is process analysis and process mapping across WLS verticals (Flow, Structured, CRE, Collateral, Specialty) and translated operations into to-be Camunda-based workflow models, dynamic forms, and validation rules.

Drove process re-engineering, process design, and operating model transformation, while managing backlog prioritization, sprint execution, stakeholder alignment, and production releases in a regulated, high-volume environment.

Impact & Results

- Consolidated and standardized workflows across 200+ mailbox owners with tailored logic per business line (Flow, Structured, CRE, Specialty).
- Reduced email request SLA breaches and eliminated data silos, improving loan processing speed by 30–40%.
- Enabled business-led configuration and publishing of workflows—zero dev dependency for production changes.

Cognizant Technology Solutions Pvt. Ltd. | 1.5+ years (*Jan 2021 – Nov 2022*) | Bengaluru, India

Role: Programmer Analyst / Quality Assurance Engineer | Client: Loblaw Companies Limited

Supported quality engineering, release governance, and platform reliability across 10+ enterprise applications spanning supply chain, logistics, procurement, and ERP ecosystems for one of Canada's largest retail organizations. Contributed to ensuring operational stability of mission-critical platforms supporting nationwide retail operations with high transaction volumes and complex system integrations.

Role & Key Contributions

Owned end-to-end functional, regression, integration, and automation testing across multiple enterprise applications in a fast-paced delivery environment. Designed and optimized test strategies aligned with business requirements, collaborated closely with product owners, QA/SDET teams, and business stakeholders, and strengthened release governance through automation using Robot Framework.

Acted as a liaison between offshore, onsite, and client teams to drive structured defect triage, improve release predictability, and enhance production readiness across quarterly and incremental releases.

Impact & Results

- Built automation test suites using Robot Framework, reducing manual effort by 35% while maintaining 98% defect closure SLAs.
- Conducted IDoc validation for SAP SCM, ensuring data integrity across supply chain workflows.
- Automated 300+ manual test cases and improved release efficiency through standardized validation frameworks.
- Led defect triage forums and delivered weekly quality dashboards to client stakeholders.

SKILLS

Functional Skills Product Ideation | Product Strategy & Roadmapping | Product Lifecycle Management (PLM) | MVP Definition & Enterprise-Scale Rollout | Business Transformation | Business Process Transformation | Operating Model Design & Modernization | Process Re-engineering | Process Mapping (As-Is / To-Be) | Process Design & Optimization | Process Optimization & Workflow Automation | Risk Governance & Credit Platform Design | Market & User Research | Requirements Definition | Backlog Prioritization & Value-Based Trade-offs | Stakeholder & Executive Alignment | Cross-Functional Leadership | OKRs & KPI Frameworks | Capital-Efficient Delivery | Go-To-Market & Adoption Strategy

Agile: Scrum | Kanban | SAFe | Sprint Planning | Release Management | Acceptance Criteria Definition | Agile Governance & Incremental Value Delivery| Lucid Chats | Excel | PowerPoint Presentations

Technical Skills: : UI/UX Collaboration (Figma, Balsamiq, Wireframing, Prototyping) | Camunda BPMN | JIRA | Confluence | Robot Framework (BDD Framework) | Jenkins | GitLab | Alteryx | JMeter | SAP | SQL | Testing Automation | Functional & Regression Testing | UAT Coordination | JSON/XML Data Structures | SDLC & STLC | Documentation (BRD, FSD, User Manuals) | API Integration (REST) | Microservices Architecture.

EDUCATION

Vellore Institute of Technology, Chennai | B.Tech in Electrical & Electronics and Engineering *2017-2021*

CGPA – 9.13

Army Public School, Jalandhar | HSC(XII) *2015-2016*

Percentile – 87.4 %

Army Public School, Jalandhar | SSC(X) *2013-2014*

CGPA – 8.6
